## WILSON for Railway Construction Safety

 GrünBau Fairkehrssicherungsdienst

## GrünBau Fairkehrssicherungsdienst digitises planning and billing with WILSON

### The Starting Point

The team at GrünBau Fairkehrssicherungsdienst in Dortmund, Germany planned its many assignments **using Excel or paper lists.**

Time recording and payroll accounting were done manually and were **prone to errors**, especially because different hourly rates (day/night), piece-based items and customer-specific rules had to be taken into account.

Employees needed to be trained in correct shift planning and break recording.

GrünBau was therefore looking for a simple way to organise itself digitally.

## WILSON for Railway Construction Safety

 GrünBau Fairkehrssicherungsdienst

### The Solution

With the introduction of WILSON, GrünBau now **plans duty rosters and shifts for its crews digitally** and makes them available via the WILSON app. **Time recording** takes place **directly in the system**, as does the management of absences and master data. The company uses WILSON.Payroll for payroll accounting. This **automates preparatory payroll accounting**, successfully calculates employees' wages and allows the data to be processed directly into other applications.

Customer billing has also been greatly simplified with WILSON.Billing. Services such as security guards, security supervisors and other **activities are billed centrally via WILSON**. Complex surcharges, such as for different levels of day or night shifts, can be automatically taken into account in the system.

The introduction of WILSON was accompanied by close communication with the project team on the customer side. **Individual training sessions on app usage and shift planning** ensured a smooth start. Additional employees are being integrated into the system step by step.

 GrünBau Fairkehrssicherungsdienst

### Effect & Outlook

The **transition to WILSON was quick and successful**. Managing Director Björn Schroer actively works with the software himself and supports his colleagues in using the app. The first **payroll runs**, including data export into other applications, **went smoothly**, significantly reducing the amount of post-processing required.

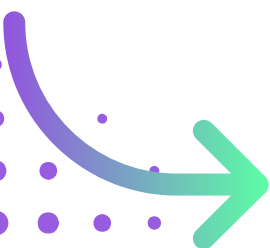

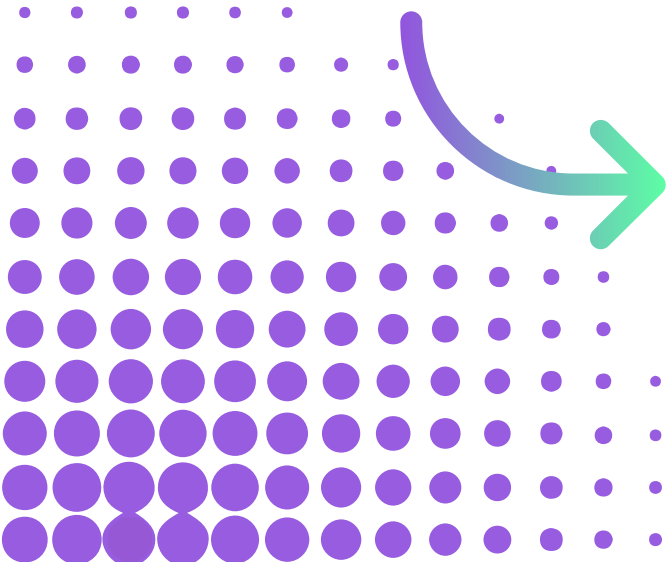

Structured shift planning now ensures **greater planning reliability** and **reduces typical sources of error**, for example during breaks or activities. At the same time, billing becomes much clearer, as even **complex customer agreements are clearly mapped** in the system and special cases such as additional items can be clearly regulated.

The next step is to have payroll accounting for all employees handled entirely by WILSON. In addition, all customer services will be systematically stored in the system and the team will be regularly informed about new functions and best practices in order to make optimal use of WILSON.

”

With WILSON, we have got our accounting and planning under control. The team enjoys using the app, and the first payroll exports ran smoothly right from the start. We are now gradually rolling it out to all colleagues and also bringing complex customer agreements into the system in a structured manner. “

Björn Schroer, Managing Director GrünBau Fairkehrssicherungsdienst
