## Manufacturer independent analysis platform

Unleash the potential of your digital infrastructure with tecWatch monitoring and catapult your technical operations management to the next level. tecWatch is a web application that can be integrated into your company's IT system, enabling you to view information on malfunctions and faults directly and react accordingly. We customize tecWatch to your individual needs to achieve the best possible result for you. tecWatch is a platform with the aim of standardized monitoring of indoor and outdoor assets based on the automated transmission of data points. It processes all data points that are specified in accordance with EULYNX and made available via digital signalling technology and other OT.

## Who benefits from tecWatch?

Technical operations manager

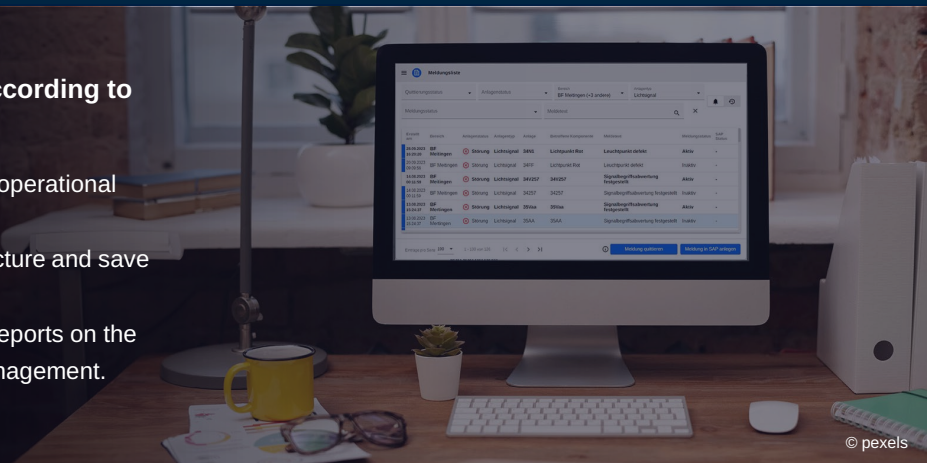

Maintenance staff

Regional manager

## Monitoring of digital interlockings according to EULYNX

- ✓ Gain more time for the real problems of operational management.
- ✓ Reduce regular checks of your infrastructure and save valuable time and costs.
- ✓ Always have an overview: We develop reports on the health of your infrastructure for your management.
