

# Dash 9 to EVO Control Stand Modification

*"Uniting Innovation, Engineering, Manufacturing and Distribution"*

## Product Description

PowerRail, an AAR M-1003 Certified Quality Company, has successfully completed a Solution Project for a Class I Railroad.

The customer was challenged with the GE Dash 9 Locomotive Control Stand being slightly different than the GE EVO series. PowerRail's modified design drastically improved Visibility, Compatibility, and Ease of Operation.

The Synergy between Avoca Rail Products, who manufactured the shell, and PowerRail Electronics Technology, who wired and assembled the complete Control Stand Cabinet, offered a true turn-key solution for our Customer.

PowerRail offers a full line of New and Remanufactured Control Stands, as well as New Desktop and Full Simulators.
