NanoSlic® Coatings

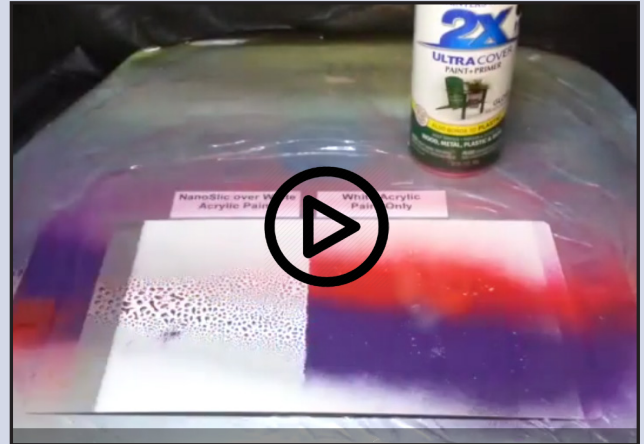

Developed by Florida CirTech, a leader in the chemical coatings industry, NanoSlic® coatings have a hydrophobic and oleophobic surface, designed to protect against water, oil, chemical corrosion and abrasion.

NanoSlic® Coatings are:

- **Hydrophobic** - repels water
- **Oleophobic** - repels oils
- **Environmentally Friendly**
- **Permanent**
- **Waterproof**

Key Advantages of NanoSlic®

Anti-Graffiti Coating - repels both **WATER-BASED** AND **OIL-BASED** paints to prevent vandals from defacing your property.

Easy Clean Coating - protects against build-up of dirt, bugs and grime, making clean-up easier and reducing cost associated with wash stations.

Every year, Railroads spend millions of dollars cleaning defaced railcars. PowerRail Locomotive Services and Mobile Maintenance, offering field service from coast to coast, can apply NanoSlic® Coating to your locomotives or railcars as part of a new paint job, or simply as a top coat.
