

We are here for you
YOUR PARTNER FOR SAFETY

Customer-oriented // Whether you are looking for a standard or bespoke system - we have the right solution for you. Flexibility is very important to us - we are always at your side as a competent and reliable partner with many years of construction site experience and immediate delivery capability.

Team // ZÖLLNER - that means a team of more than 180 employees in Kiel. Development, production, training, sales, handling and after-sales – everything you could ever need is under one roof.

24/7 Support // Our 24/7 support hotline is there for you around the clock. Experienced ZÖLLNER technicians can advise you should you have any problems on site and support you remotely if necessary, giving you ultimate peace of mind.

Academy // We are proud to have our own training centre, the ZÖLLNER Academy. We are a recognised training provider and offer a mixture of theory as well as practical, hands-on training. You can choose to attend our fully equipped academy or have us deliver our training at your site – whichever is most convenient for you. Our training courses will bring your staff up to date with the safest operation of the latest products from ZÖLLNER leaving them with the skills to keep them safe on track.

We design your safety solutions.

ZCloud - MRWS in the Cloud
MRWS - NOW ALSO DIGITAL

NEW

ZCloud // Tracker

KEEP STATUS AND OPERATING INFORMATION FROM VARIOUS DEVICES
DIGITALLY IN VIEW AT ALL TIMES

ZCloud // Tracker

Here are some options

Select which active system you want to enquire about. Find out which of your devices in inventory are not yet scheduled. Check the location of your devices. All information is stored in the logbook and can be retrieved or exported from there.

Monitoring of device positions

Even when the devices are switched off, the location information continues to be transmitted to the ZCloud for up to 24 hours.

Obtain information about the current distance between ZFS and ZRC at any time by means of location information from both components.

The Lookout can check the ZFS display at any time to see if it needs to increase or decrease its distance from the site. ZCloud uses the information from the device trackers to detect which components are working together in a system and groups them accordingly as an "active system".

Simple access control with optimal user and device management

Every customer gets secure access to the cloud from ZÖLLNER. Within this access, each customer manages the admin rights of the various employees themselves and can add new employees at any time. ZCloud can be displayed on different devices (smartphones, tablets or PCs).

Retrofit at any time

Existing components ZFS and ZRC can be retrofitted with the Tracker at any time - Contact us!

REAL TIME MONITORING

Work sites, device data, system status and location information can be tracked in real time and regardless of location.

NOTIFICATIONS & ALERTS

Get timely notification and alerting of critical device and system states, such as low battery states.

TRACKING

Keep track of system deployments, components used and all other devices at any time and anywhere.

Fig. 1 ZÖLLNER devices communicate with the ZCloud. Thus, the data is accessible via web app on mobile devices.

DISTANCE MONITORING

Permanent determination of the distance between the switch-on transmitter and the construction site. Display of the current distance in the display of the switch-on transmitter.

DATA ANALYSIS

Evaluation of utilization times, operating times and locations is possible by analyzing and exporting the stored device data.
