

SRS Rail System International Ltd are pleased to have the first, new to market movement limiting system configured for Road Rail Vehicle Mobile Elevated Working Platforms (RRV MEWP's).

The system has been assessed and certified compliant to RIS-1530-PLT Issue 6 and meets PLd / MLD003 for on track Adjacent Line Open (ALO) working. Network Rail (NR) Product Acceptance (PA) is approved under PA05/07436.

The movement limiting system is a first for on track use and under its current MEWP configuration, can have custom heights stored for different operators and tool heights.

The fully proportional system ensures the smoothest operation towards active - virtual walls, height limits or slew limits.
