deugro visiotrack Enables Optimised Supply Chain

At the beginning of 2020, deugro launched its in-house IT platform, deugro visiotrack.

Today, after two and a half very successful development years, deugro has more than 25 clients who use the system on a daily basis. In order to ensure quality, efficiency and ongoing communication between all parties involved, deugro visiotrack, a web-based supply chain management system, provides a complete overview of all data at all times. The dashboards are one of the main features of the tool.

Through customisable dashboards, deugro visiotrack provides access to all information. A graphical representation and role-specific information can be displayed at a glance. By selecting a variable, the dashboards provide more detailed information. In the performance widgets, all measure points are clickable, and the underlying data is displayed in detail.

Dashboards enable performance

*The tracking feature of the deugro visiotrack app*

and data analyses, aggregated to the highest useful level (depending on the role of the user), cost analyses and reporting, as well as the tracking of relevant data.

As a result of predictive analytics, significant business impacts can be

addressed and prevented:

• Loss of business activities due to supply chain inefficiencies
• Manual processes costing time and money
• Vendor performance / non-conformity in a financial context

Transport orders showing emissions per shipment

- Capital expenditure management (coming soon)

As part of the cost analysis coming soon, the system provides an overview of spend, broken down into desired levels, as well as a forecast based on historic data. Furthermore, freight rate auditing can be easily supported by tracking logistics services spend against predefined annual budgets.

With the deugro visiotrack app, deugro has now enhanced its web-based supply chain management system. Users can access shipment-relevant information in real-time via the app, which is available for iOS and Android. With the app, users also have deugro visiotrack's functionality and information on the go, such as scanning barcodes and QR codes and uploading pictures and documents without access to a computer.

Due to the growing demand for deugro visiotrack, a global customer solutions team was established to create solutions for clients and to provide world-wide support. deugro's global presence allows us to respond quickly to clients' needs with customised configurations. With deugro visiotrack, users have been able to view all emissions information at any time at the touch of a button since April 2022.

In order to reduce carbon emissions, deugro already provides extensive logistics studies and analyses for clients like rail companies.

"As part of deugro's commitment to providing innovative logistics solutions for our clients to support global CO2 reduction, and in line with our social responsibility for a net-zero future, the newest feature of the deugro visiotrack

tool is another important step towards achieving environmental sustainability," said Mario Hess, Global Head of Customer Solutions – deugro visiotrack, deugro.
